Production companies, including Apple Music, and.. acid-house producers such as Roni Size, Sean Paul, and. a trilogy of albums that have. At the heart of a trinity of albums from Big Apple Records. a series of records that cemented his place as one of the most. This invention relates to an apparatus for organizing and storing footwear articles. There are a number of devices which provide a plurality of individual, interconnected storage compartments for storing a number of articles, such as shoe laces, shoe strings, shoe buckles, shoelaces and shoe shanks. These devices are not readily portable, because the compartments cannot be moved from their original location. Furthermore, it is sometimes desirable to quickly and easily access these compartments. U.S. Pat. No. 5,979,766 to Yata teaches a series of interconnected compartments which are connected to each other by vertical connectors that are folded in a direction perpendicular to the longitudinal direction of the compartments. Because these connectors are folded, they are subject to springing back into their original shape. This is undesirable, because it allows the compartments to close after the items are inserted in them. U.S. Pat. No. 4,960,030 to Yada teaches a series of compartments that are connected to each other by horizontal connectors. In order for the compartments to close, they must each be locked together in their closed position, which makes them less than optimal for use. U.S. Pat. No. 4,957,305 to Thurman teaches a series of compartments, but each compartment is actually a box, and these boxes are interconnected by horizontal and vertical connectors. U.S. Pat. No. 5,692,835 to Jones et al teaches a series of interconnected containers, but each container is a relatively small box. U.S. Pat. No. 5,979,766 to Yata teaches a series of interconnected compartments, but each compartment is a flat box-like structure, and the compartment connectors are vertical. U.S. Pat. No. 5,390,118 to Sutton teaches a series of interconnected containers. Each container is a flat box-like structure, and the container connectors are vertical. Thus, there is a need for a portable device that has a large number of interconnected compartments for storing a number of articles, which are easily accessed and easily closed. The above mentioned needs are 82157476af
